

Suite Operation & End-User Instruction Manual

User Operation Manual

Welcome to the **Titanic Survival Intelligence Suite**. This guide takes you step-by-step through the core functionalities of the platform.

1. Authentication & Session Security

- * **Register / Sign In**: Access the login portal from the landing page. The first email registered in the database is automatically assigned administrative privileges.
- * **Session Timeout Warnings**: If your active session has less than 5 minutes remaining, a warning alert modal will overlay on the screen.
- * Click **Extend Session** to extend your session for another 24 hours.
- * Click **Log Out** to close the session immediately.

2. Platform Dashboard

- * **Aggregate KPI Widgets**: Monitor predictions count, active users, accuracy score, and recent log changes.
- * **Demographics Analytics**: Hover over the Recharts graphs (Bar, Pie, Area) to query detailed passenger survival breakdowns by gender, age groups, and class segments.

3. Single Passenger Predictions

1. Navigate to the **Prediction Center** tab in the sidebar.

2. Enter t

4. Explainable AI (XAI)

- * Click the **View Full XAI Analysis** link under your prediction speedometer, or select **Explainable AI** from the sidebar.
- * **Survival Contributors (Local SHAP)**: Inspect the horizontal forces chart.
- * Emerald bars indicate factors that increased survival probability (e.g. Female Gender).

- * Rose bars indicate factors that decreased survival probability (e.g. Third Class ticket class).
- * **Feature Importances (Global Weights)**: Review the global feature priorities computed across the historical dataset.

5. Batch CSV Upload

1. Navigate to the **Batch Prediction** tab in the sidebar.

2. Click
(^pclass,r

6. Reports & Admin Exports

- * Navigate to the **Reports** tab.
- * Click **Download PDF Summary** to fetch a Helvetica-designed executive document containing diagnostics tables and distributions.
- * Click **Copy Markdown Snapshot** to copy a text-formatted summary of active session diagnostics.
- * Administrators can navigate to the **Admin Panel** to change user roles, review system audit logs, or download complete JSON database backups.
